## **5. Abstract**

Photo Studio Website allows the Customer to view all sorts of Photography available and gifts available. It shows the how many categories of gifts and what events can be covered by the Studio Lucky Digital. This website helps any new or old customer to login or sign up accordingly. This website helps user to find categories of Gifts and Photographs. The main purpose of this project is to provide user a variety of choices according to their preferences. This project contains different types of Photography and gifts along with their description and their prices for the customer to make a clear choice. This project also gives user the option to opt for cash on delivery. Online is the new trend these days, pandemic also has made all things work online and our website only intends to make the task simpler for the people looking for a gift and photoshoot. This project provides a lot of features to manage in very well manner.

## **6. Introduction**

Photo Studio Website allows the Customer to view all sorts of Photography available and gifts available. It shows the how many categories of gifts and what events can be covered by the Studio Lucky Digital. This website helps any new or old customer to login or sign up accordingly. This website helps user to find categories of Gifts and Photographs. The major goal of this project is to give users a variety of options to choose from based on their interests. This project includes several forms of photography and gifts, as well as descriptions and costs, so that the consumer can make an informed decision. This project also allows users to pay via cash on delivery. Online is the new trend these days, and pandemic has made everything work online as well. Our website's sole purpose is to make the task easier for customers seeking for a present or a photoshoot. This project has a lot of features that can be managed in a very efficient manner.

## **7. Study of Existing System**

The existing system is Manually done there no computerised system to view products and details. System required more time. Searching of information is difficult. Present system is tedious. Present situation is not user-friendly. Work is done manually.

## **8. Study of Proposed System**

Proposed System is easy to use, The main aim is to create a website for studio and services to guide users about the best available option for their purchase. To ensure that customers are provided access to latest trends of Photoshoots and gift products at affordable prices. Reduced time, improved efficiency. To make it easier and convenient for the customers to navigate through the site. Searching to become more efficient and fast. Easy to generate orders. Easy to contact with the admin. For the checking if the product is available or not in the cart. To provide a user-friendly interface.

**Home page:** This process allows the user to navigate through the different options available on the website.

**Contact Page:** This process allows the user to send email to the owner and enquire things as required.

**Port folio:** This Process will allow the user to see through the works of the shop and get more ideas on photoshoots which are provided.

**Shop:** This process allows the customer to find products and place an order. User can fill the contact number address of the user.

**About us:** This process allows the user to understand who is owner and team of the customer.

**Account:** This process allows the user to register for first time and login in if you already have an account created and can check previous order and details of the user.

## 9.System Requirements

Front end tool: - HTML5, CSS3, Java Script

Backend Tools: - Django

### Hardware and Software Requirements

#### ➤ Hardware (Recommended)

Processor – CORE i3 & above

Hard disk – 40GB

RAM – 512MB

#### ➤ Software(Recommended)

Operating System – Windows 7+

## 10.Analysis

Photo Studio Website allows the Customer to view all sorts of Photography available and gifts available. It shows the how many categories of gifts and what events can be covered by the Studio Lucky Digital. This website helps any new or old customer to login or sign up accordingly. This website helps user to find categories of Gifts and Photographs.

### 10.1 Purpose

The main purpose of this project is to provide user a variety of choices according to their preferences. This project contains different types of Photography and gifts along with their description and their prices for the customer to make a clear choice. This project also gives user the option to opt for cash on delivery. Online is the new trend these days, pandemic also has made all things work online and our website only intends to make the task simpler for the people looking for a gift and photoshoot. This project provides a lot of features to manage in very well manner.

## **10.2 Scope**

Our project would help the users to get all the necessary details about photoshop one single stop. It would certainly save their time and give them a more clear view and help make them right decision.

- ❖ **Photoshoot:** Each and every type of photoshoot and gifts are displayed at the site has their respective description about their features, price.
- ❖ **Customer:** Customer can meet their requirements
- ❖ **Free surfing:** Our websites is free of cost and the users can surf through it without any extra payment.

## **10.3 Definition**

HTML: Hypertext Markup Language.

CSS: Cascading Style Sheet.

JS : Java Script

## **10.4 Overview**

Our website has been developed to override the problems prevailing in the practicing manual system. The application is reduced as much as possible to avoid errors while entering the data. It also provides error message while entering invalid data. No formal knowledge is needed for the user this system. Thus, by this all it proves it is user-friendly. This project can lead to error free, secure, reliable and fast management system. It can assist the user to concentrate on their other activities rather to concentrate on record keeping. The website can maintain computerized records. Basically, the project describes how to manage for good performance and better services for the clients.

## **10.5 Product Perspective:**

Designed for such clients who are looking up for Photo Printouts, To Cover events, and gift items and do not find time in their tight schedule to go to shops check rate and order and them buy the product. The system helps in providing a much wider reach and thereby advertising and attracting more customers. And it provides friendly interface to the user.

## **10.6 Product Function/Features:**

The Photo Studio System has the following information

- A user-friendly home page which exposes the user to various off subpages which shows what are the service available.

- The system has standardized features and pages like Portfolio, Cart, Contact Us, About Us, navigation bars.
- Provides detailed description of the Products available in the store.
- The system will provide account facility to check previous order and many more.
- Cart page allows to store the items on wish list.

### **10.7 User Characteristics:**

The following are the various types of users who use the system:

- Users like, Casual web surfers, who go through the website not with the definite idea of gifting can go through the page.
- Users who are curious shoppers and are interested in purchasing or booking a event helps a lot.
- Users who are enthusiast of photography and gift products can avail the to purchase the items.

### **10.8 General Constraints:**

- Once the user wants to communicate with the admin he/she has to provide their basic details for a more personalized experience.
- If the user wants to book a service the website demands the user to book a date and time according to his/her convenience.
- Customer can avail Cash on delivery as well.

### **10.9 Assumptions and Dependencies:**

- The website is ready to use only if there is an online connectivity to the internet.
- It is assumed that the user interacting with the system do have the basic knowledge of accessing and operating the internet.
- There must be a proper network connection in order to provide a smooth interface to the user without any disruptions.
- The performance of the system depends upon the hardware and web browsers used by the user.

### **10.10 Specific Requirements**

This gives the description about the requirements which have been used in the project to guide the project's software design, implementation and testing.

### **10.11 External Interface Requirements**

The described types of interfaces mentioned below are supported by the project, which are the User Interface, Hardware Interface and Software Interface.

### **10.12 User Interfaces**

- The user interface used in the project is a Web-based user interface.
- The project shall provide a uniform look and feel between all the web pages.
- Front-end software: html 5, CSS 3 JavaScript.
- The project is easily usable when used on computers.
- The project will provide use of icons and toolbars.

### **10.13 Hardware Interfaces**

- Since this project is web-based, it can be used only with the help of internet connection. For this the user has to have an Ethernet or Wi-Fi, a modem and a suitable LAN connectivity.

### **10.14 Software Interface**

- Runs on Windows operating system. Compatible from version 7 and above. Windows operating system can be used for its best support and user-friendliness.
- A browser which supports HTML & JavaScript is required such as Google Chrome, Firefox, Microsoft edge.
- To implement the project HTML, CSS and JavaScript language is used for its more interactive support.
- Django is used for Framework and database to collect the data for future reference.

### **10.15 Communication Interfaces**

- This project supports certain web browsers mostly Microsoft Edge, Chrome and Firefox.
- The TCP/IP protocol suite is used for communication over the internet.

### **10.16 Non- Functional Requirements**

- **Performance**
  - i. This project is based on web and must run from a web server.
  - ii. The project's initial load time will be dependent on the internet connection speed/strength, which also depends on the media from which the project is run.
  - iii. The performance shall depend upon hardware components of the customer.
- **Accuracy**

The project shall provide 100% access reliability and accurate results.
- **Reliability**
  - i. The project is 100% reliable due to the importance of data and the damages that can be caused by incorrect or incomplete data.
  - ii. The project is designed to have a very reliable frontend. It is tested for all the constraints at development stage.
- **Security**
  - Data Transfer
    - i. The project shall use secure sockets in all transactions that include any confidential customer information.
    - ii. The project shall not leave any cookies on the customer's computer containing any of the user's confidential information such as their password, unless the client employee requests the browser to do so.
- **Portability:** The project is portable and can be accessed by any Microsoft based system.
- **Flexibility:** The website runs well on web browsers such as Internet explorer, Google Chrome or Firefox which is reliable for users to access. There will be no maintenance required for the website.
- **Maintainability:** There will be no maintenance required for the software. The database is provided by the end user and is maintained by the end user.
- **Timeliness :** The project is available 100% for the user and is used 24 hours a day and 365 days a year. The project shall be operational 24 hours a day and 7 days a week. Will be available as long as internet connection is available.

## **10.17 Design Constraints**

- Standard Development Tools

The project is built using a standard web page development tool that conforms to Microsoft's GUI standards.

- Web Based Project

- i. The computers must be equipped with web browsers such as Internet explorer, Google Chrome or Firefox.
- ii. A general knowledge of basic computer skills is required to use the project.
- iii. Response time for loading the project should take no longer than five minutes.
- iv. There are no memory requirements.

## **10.8 OVERALL DESCRIPTION OF THE PROJECT**

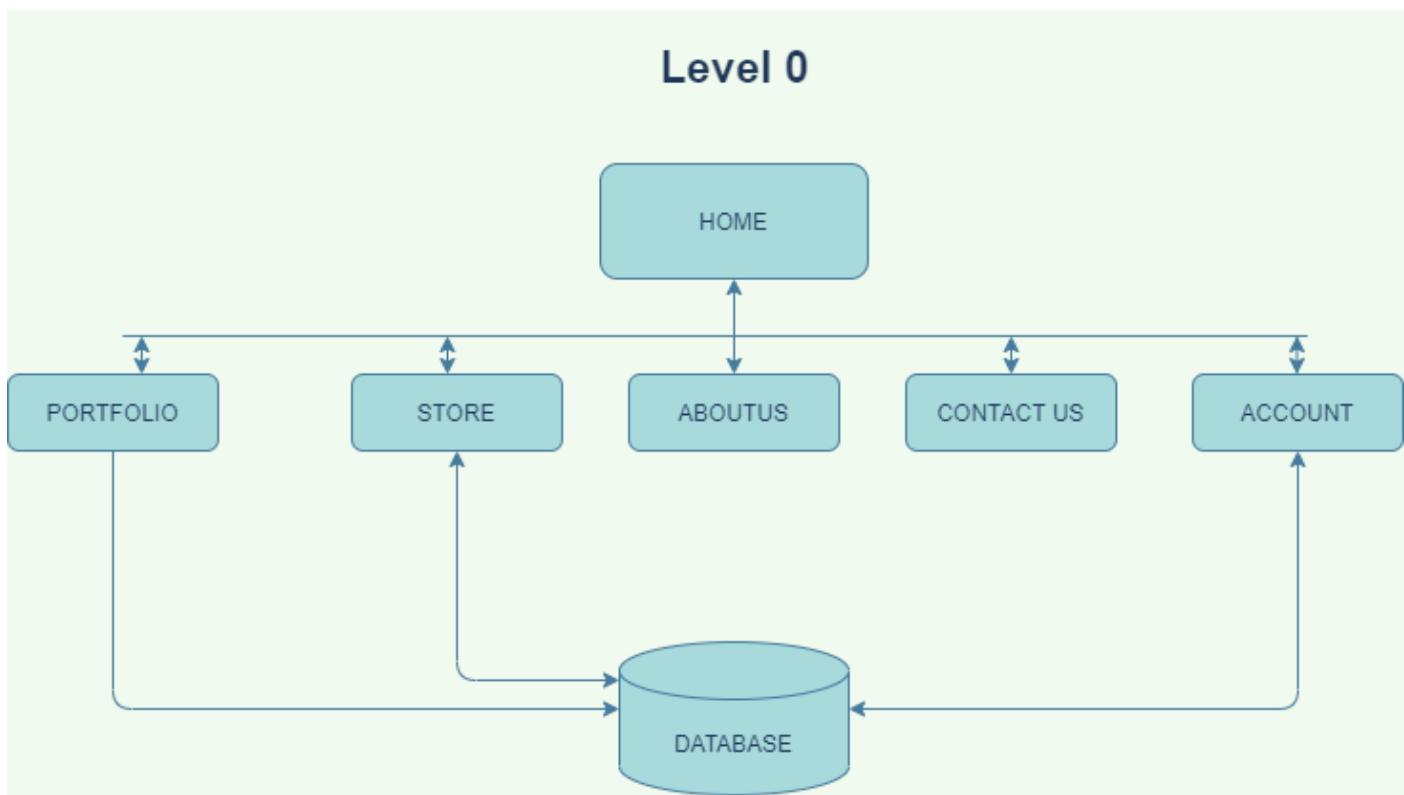

If anyone looking forward to making beautiful movements towards best photograph framework then you are at the right spot.

This website is to visualize how making your beautiful movements into perfect memories into a high-quality HD image. This website helps people to choose what kind of shoots they want what kind of gift they want to gift their loved ones.

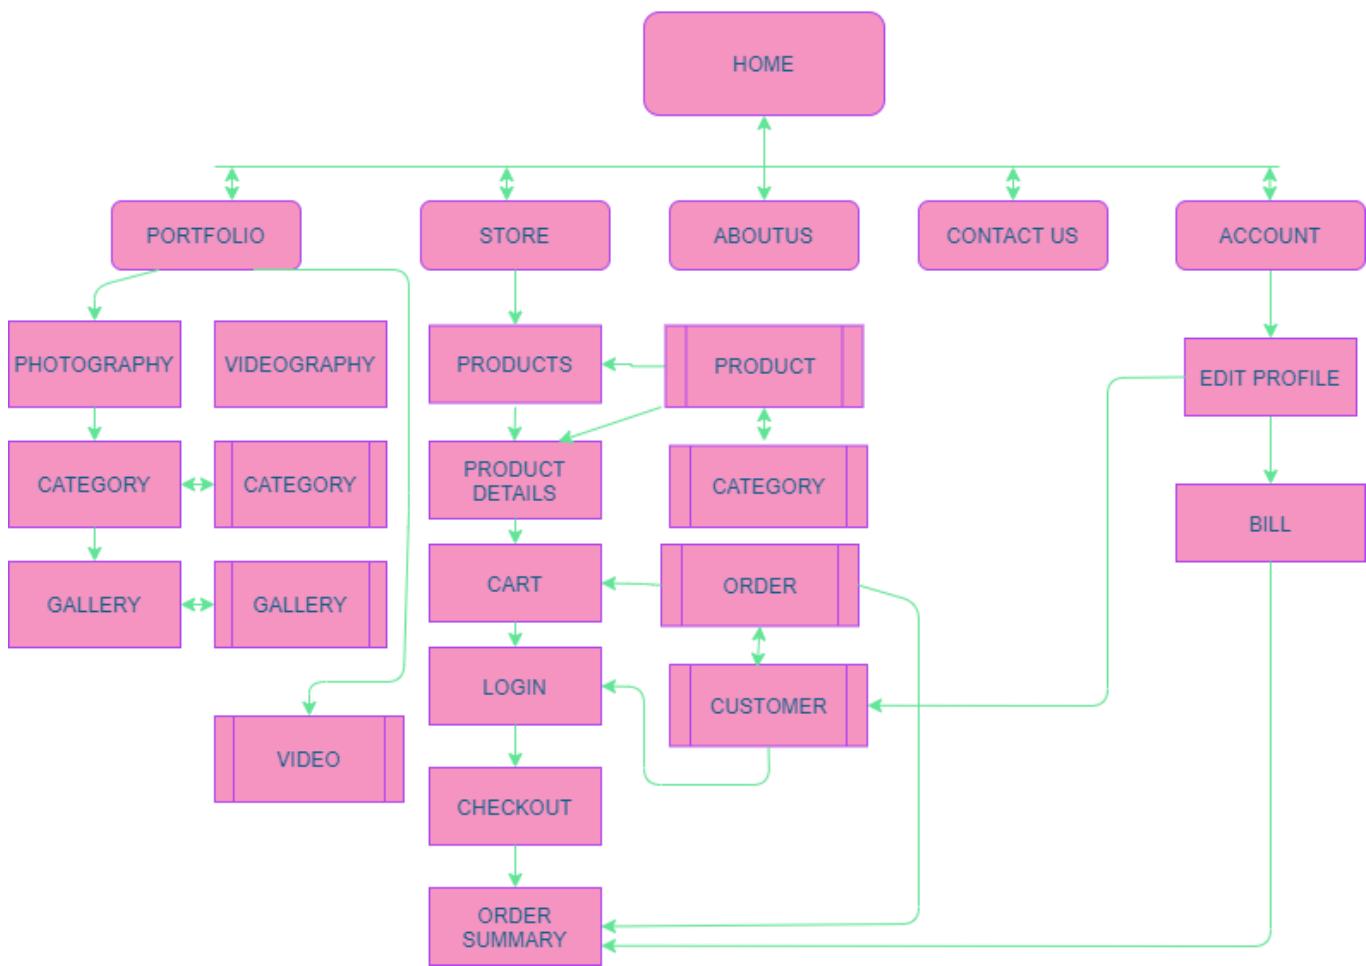

This website is mainly focused on placing an order through the site by signing in. It can be a Shoot or any products in the shop. Customers Information are saved in backend and used for placing order.

## **13. TESTING**

Testing is the process of running a system with the intention of finding errors. Testing enhances the integrity of system by detecting deviation from design and errors in the system. Testing aims at detecting error-prone areas. This helps in prevention of errors in a system. Testing also makes sure that the project is built according to the user requirement. The main purpose of testing is to detect errors and error-prone areas in the system.

### **13.1 TEST PLAN**

It is a document describing the scope, approach, resources and plan of intended test activities. It identifies amongst others test items, the features to be tested, the testing tasks, who will do each task, degree of tester independence, the test environment, the test design techniques, entry and exit criteria to be used, and the rationale for their choice ,and any risks requiring eventuality planning. It is a record of the test planning process.

### **13.2 INTRODUCTION**

Provides an overview of the project and the different types of coding used in it. It also specifies the goal of the project and its future scope.

### **13.3 RISK FACTOR**

- Unauthorized access
- Source Code not protected

### **13.4 FEATURES TESTED**

The software/product to be tested. The Requirements and/or Design specifications of the features to be tested

### **13.5 TEST PROCEDURE**

System testing is the stage of implementation this is to check whether the system works accurately and efficiently before live operation begins. Testing is vital to the success of the system once under commission

### **13.6 BLACK BOX TESTING**

This method enables the devices sets of input technique that fully exercise all functional requirement for the program .Black box testing test input ,the outputs and the external data .it checks whether the input data is correct and whether we are getting the desired output

### **13.7 INTEGRATION TESTING**

Integrating testing is a logical extension of unite testing. In its simplest form, two unites that already tested are combined into a component and the interface between them is tested. A component, in this sense refers to an integrated aggregated of more than one unite. In the realistic scenario, many unites are combined into components which are aggregated into even large parts of the program

### **13.8 REGULATION TESTING**

System testing of the software or hardware is testing conducted on a complete, integrated system to evaluate the system's compliance with its specified requirements .System testing falls within the scope of black box testing and such should require no knowledge of the inner design of the code or logic

## **14. FUTURE ENANCEMENT OF THE PROJECT**

There are future enhancements which will be done in the project. And may be some other kind future changes will be possible in our system also.

- Implement a module for online Payment.
- Gift Card availing Option.
- Collaboration with local shops.
- Responsive design for all kind of devices.

Next version will also resolve any error or mistake remained unsolved in this version.

## **15. CONCLUSION**

We hereby, conclude our project by listing future enhancement and benefits.

These are the future enhancements we are going to do in our project. If there is any other future requirement by the user for the enhancement of the system, then it is possible to implement them.

- Implement a module for online Payment.
- Collaboration with other local shops.
- Gift Card availing Option.
- Responsive design for all kind of devices.

Next version will also resolve any error or mistake remained unsolved in this version.

To search for gift items and book a shoot for any events such as wedding, baby shower, birthday etc. A lot of such websites are around from where one can view different gifts and book shoot. It is a more convenient and practical way of knowing about the latest trends in market and filter the options according to budget and choice.
